Today’s health care system fails to provide quality, therapeutic care to every U.S. resident and wastes hundreds of billions of dollars a year in unnecessary administrative costs. Medicare for All would expand the cost-effective and administratively efficient Medicare program to finance comprehensive, high-quality health care for everybody in the United States. Most importantly, a Medicare for All — single-payer system — would provide health care based on patient need, not on profit.

Our Current Health Care System is Ineffective, Inefficient, and Expensive

Today, roughly 30 million Americans remain uninsured,¹ and an additional 41 million adults are underinsured.²

- In a recent poll, 20 percent of insured Americans reported having trouble paying their medical bills.³
- 36 percent of privately insured Americans are covered by high-deductible health plans.⁴ Such plans have an average deductible of $4,347 per year for a single family.⁵

The United States spends twice as much on health care as other major industrialized countries.

- The patchwork system of private for-profit insurers necessitates over $200 billion per year in administrative-related activities, and represents 20 to 30 percent of U.S. health care costs.⁶
- Americans pay excessive prices for medical visits and procedures.⁷
- In 2017, the U.S. spent 18 percent of the GDP on health care, far exceeding other industrialized nations with projections of 20 percent by 2026.⁸

Despite outsized spending on health care, the U.S. experiences extremely poor health outcomes.

- 33 percent of U.S. adults go without recommended care, do not see a doctor when sick, or fail to fill a prescription because of costs. Only 7–8 percent of people in the U.K., Germany, the Netherlands, and Sweden experience these problems.⁹
- The United States has the highest number of preventable deaths under the age of 75, when compared to 18 other industrialized countries.¹⁰
- The infant mortality rate in the United States is nearly double the average rate of 13 major Organization for Economic Co-operation and Development (OECD) countries, with 6.1 infant deaths per 1,000 births.¹¹
- In 2014, 68 percent of Americans over the age of 65 were living with two or more chronic conditions, compared to only 33 percent in the United Kingdom.¹²

We need a health care system that will prioritize the needs of patients, and provide equal access to quality, therapeutic health care for every person who needs it. A single-payer system has been proven to do this effectively in many countries throughout the world.
The Majority of Americans Want a Medicare for All Health Care System

An October 2018 poll by Hill.TV/HarrisX shows that 70 percent of registered voters support Medicare for All, with 86 percent of Democrats and 52 percent of Republicans supporting it.

An August 2018 poll by Reuters/Ipsos showed that 70.1 percent of voters support Medicare for All, with 84.5 percent of Democrats and 41.1 percent of Republicans supporting the policy.

Young Americans overwhelmingly support a single-payer program. An Associated Press poll from October 2018 showed that 69 percent of young Americans between the ages of 15 and 34 favored a government-run health insurance program.

Support for a Medicare for All system is growing!

Medicare for All Offers a Comprehensive, Life-Saving Solution to the Health Care Crisis

How It Works »

• A single-payer system would expand the existing Medicare program to cover everyone in the United States.
• A single government agency would replace private insurance companies and provide the public financing of health care.
• Patients would have their choice of health care providers.
• All medically necessary services would be covered, including doctor’s visits, hospitalization, preventive care, long-term care, mental health, reproductive health, dental, vision, medical supplies, and prescription drugs.
• The new system would lead to a net increase of 2.6 million jobs. It would be an economic stimulus for small businesses which would no longer be responsible to pay for private employee health insurance.
• Medicare for All would enable the professional clinical judgment of doctors and nurses to be the basis of health care decisions.
• Medicare for All would eliminate health insurance industry profits, marketing costs, and administrative waste and allow for the negotiation of drug prices and medical fees, saving nearly $500 billion annually. This is enough to cover all of the uninsured and to eliminate deductibles, coinsurance, and copays for everyone, and still save the country trillions of dollars.
• Individuals and employers would no longer be responsible for paying premiums, deductibles, and copays.
• Seniors would immediately benefit from more comprehensive coverage in Medicare, which would be improved to cover dental, vision, prescription drugs, and long-term care services. Seniors would no longer need supplemental insurance to cover aspects of their health care.
• Medicare for All would make health care a universal right, and health care would no longer be tied to employment. As a result, no person living in the United States would have to worry about losing their health care when they change jobs.
